25+ years in software / 10+ years in leadership / 40+ engineers led

Professional profile

Engineering leader and CTO with a technical foundation spanning software development, architecture and engineering management. I have led international teams, managed development, QA, IT and technology budgets, and aligned technical priorities with Product and business stakeholders. I remain directly involved in architecture, backend development and integrations. I apply AI to products and engineering workflows, with a focus on quality, maintainability and technical review.

Engineering leadership

Technology strategy and roadmaps · Team organisation and coordination · Capacity planning and delivery · Hiring and talent development · Project and budget management · Architecture and standards · Software quality and development lifecycle improvement

Professional experience

CTO — The Bondy App

September 2024 – Present

- Lead technology across Bondy People and Bondy Tickets, covering mobile apps, backend, backoffice and partner portal; align priorities with business, Product, UX and QA.
- Combine technical leadership with hands-on development of APIs, data models and integrations for purchases, payments, bookings, refunds and supplier settlements.
- Evolve architecture, testing, CI/build, audit trails and AWS operations; integrate semantic search using embeddings, OpenSearch and LLMs, and translation with OpenAI and Gemini.

CTO — Asistentes Digitales / Sebastian

April 2023 – September 2024

- Defined strategy, architecture and the technology roadmap for an energy-sector platform. Led development, QA and IT, managing projects and budgets with Java/Spring, Angular and AWS.

CTO — Apartool

September 2022 – March 2023

- Led development, QA and IT for a corporate accommodation platform; defined architecture and the technology roadmap, and managed projects, budgets and supplier integrations.

Software Development Director — Scytl Election Technologies

October 2019 – September 2022

- Led an international organisation of more than 40 engineers across multiple teams developing election technology, with demanding security and reliability requirements.
- Aligned priorities and capacity with Product and Sales; drove development lifecycle improvements and supported architecture and software quality decisions.
- Managed hiring, onboarding, performance reviews and the development of engineers and technical leaders.

AI across the software development lifecycle

I incorporate AI-assisted development into my engineering practice and contribute guidelines that help agents work with project context and conventions. My approach connects requirements, implementation and validation, retaining technical review and testing as acceptance criteria.

Requirements and context Prepare specifications, instructions and repository context to translate business needs into actionable tasks for development assistants.

Implementation and quality Use Codex to support development and prepare test cases from user stories; review code and validate results with the team.

Evolving automation Design agent workflows from a user story through branch creation, test execution and a pull request for review; these initiatives are currently being developed.

Architecture and enterprise transformation

Software Architect — Scytl Election Technologies

March 2019 – October 2019

- Defined architecture, requirements, patterns and standards for election technology solutions, guiding implementation with development and quality teams.

CTO — Strategying / New Strategy in Action

September 2015 – March 2019

- Led technology strategy and a team of more than eight people delivering enterprise integration and process automation projects with BPM and RPA.
- Aligned priorities with the CEO and COO and oversaw solutions for GVC Gaesco, Tradisa and Grupo Arnal; contributed to SAP PO architecture for General Cable.

SAP PO and BPM Project Manager — Axpe Consulting

April 2015 – September 2015

- Managed scope, deliverables, team coordination and stakeholder communication for SAP BPM projects for IBM / SILK–La Caixa.

Software engineering and consulting

SII Concatel · Senior Engineer and SAP BPM Consultant | Aug. 2014 – Apr. 2015
Freelance · Process Consultant and BPM Architect | Sept. 2013 – Aug. 2014
BPM Iberia · Senior Software Engineer and Process Engineer | May 2009 – Sept. 2013

Architecture, development and integration with Java/Spring, SAP BPM/PI/PO and Polymita; technical coordination and consulting for FEDA, CAPSA, Bodegas Torres and Plastigaur.

1999 – 2009 · Software development, analysis and integration across enterprise applications, distributed systems, insurance, e-commerce and messaging. Roles at Mercadigital, Whads Accent, projects for IECISA, Vicertec, Expectra, Push the Button and Pragma Interactive / Praint Media Group.

Technical foundation

Backend and architecture: Java/Spring, Node.js, TypeScript, APIs, distributed systems and microservices. Data and cloud: MySQL, Prisma, AWS, Docker, CI/CD and Temporal. Product ecosystem: Flutter, Angular and React/Next.js. AI: Codex, OpenAI, Gemini, LLMs, embeddings and OpenSearch. Enterprise integration: SAP BPM/PO/PI, K2, Polymita and Kofax Kapow RPA. Management and quality: Jira, Asana and TestRail.

Education and languages

Ingeniería Técnica en Informática de Gestión — Universitat Oberta de Catalunya | 2004 – 2009
University degree in Business Informatics
SAP Business ByDesign certification (2012) · Expert Scrum Foundations (2015)
Spanish and Catalan: native · English: advanced professional proficiency
